INTRODUCTION

Web & Technical Specialist with experience across web development, web analytics, technical consulting, software engineering, and IT operations.

I build and improve modern web applications across the full lifecycle, from frontend and backend development to APIs, databases, analytics, deployment, debugging, and continuous improvement. My technical stack includes React, Next.js, Django, Python, JavaScript, PHP, SQL, Docker, and Linux.

I also have experience with Google Analytics, web tracking, and data-driven analysis. I use technical insight and data to understand user behaviour, identify problems, improve digital experiences, and support business decisions.

My background combines software development, technical consulting, business-facing communication, production troubleshooting, and independent digital product development. I am comfortable working between technical and non-technical teams and turning business requirements into practical web solutions.

EXPERIENCE

08/2026 – until now

Technical Consultant

MWT Solutions S. A.

- Analyse technical and business requirements and translate them into practical solutions.
- Work with software systems, technical workflows, and application-related processes.
- Support technical analysis, troubleshooting, and resolution of system-related issues.
- Communicate technical topics clearly with both technical and non-technical stakeholders.
- Contribute to process improvement, documentation, and continuous improvement of technical solutions.

11/2024 – 08/2026

Apple Certified Technician (AASP)

iWant | Smarty Brands - Apple (AASP)

- Diagnose and resolve hardware and software issues across macOS, iOS, and iPadOS environments.
- Work with enterprise service systems and structured technical workflows.
- Investigate incidents, identify root causes, and implement practical solutions.
- Coordinate technical processes and communicate with customers, colleagues, and other stakeholders.
- Work according to strict service, quality, and operational standards.
- Support system restoration, data recovery, and technical troubleshooting.

02/2022 – 08/2026

Web & Software Engineer

Λ L I Ξ V Platforms (aliev.io)

- Develop and continuously improve full-stack web applications and digital platforms.
- Build frontend solutions using React, Next.js, JavaScript, HTML, and CSS.
- Use Google Analytics and web tracking to support data-driven analysis and improvements to digital products.
- Analyse technical and business requirements and translate them into functional web solutions.
- Develop responsive user interfaces and work with UI/UX concepts to improve usability and user experience.
- Develop backend services and REST APIs using Python, Django, PHP, and Node.js.
- Work across application architecture, authentication, databases, integrations, and deployment.
- Perform debugging, testing, troubleshooting, and continuous technical improvements across web applications.
- Manage Docker-based environments, Linux systems, Git workflows, and deployment processes.
- Implement automation and AI-assisted functionality to improve efficiency and reduce repetitive work.

02/2022 – 08/2022

Retention & Account Manager

CapitalPanda

- Managed client accounts, user engagement, retention processes, and operational workflows within a financial technology environment.
- Analysed user behaviour and system-generated metrics to identify engagement and retention patterns.
- Used tracking and reporting data to support operational decisions and process improvements.
- Monitored user activity and platform performance to identify issues and improvement opportunities.
- Communicated with clients and internal teams and handled escalations and time-sensitive operational issues.

01/2017 – 12/2017

Software Developer

Pixelfield

- Developed and optimized production web applications and interactive projects using JavaScript and web technologies.
- Worked closely with designers to translate visual concepts into clean and responsive web interfaces.
- Debugged applications and resolved frontend and software defects.
- Participated in testing and QA activities to improve reliability, performance, and user experience.
- Contributed to interactive projects including MusicMap and Pěnožrouti 2.

SKILLS

Web development | Front-End Development | JavaScript | React.js | Next.js | Django | Python | Google Analytics | HTML5 | CSS | REST APIs | SQL | PHP | Node.js | Web Analytics | UI/UX | User Interface Design | API Integration | Debugging | Troubleshooting | Software Architecture | Git | GitHub | Docker | Linux | Nginx | CI/CD | Deployment | Automation | Artificial Intelligence | Agile development (Scrum)

LANGUAGES

Czech (proficient) Russian (proficient) English (proficient) Ukrainian (pre-intermediate)

Driving licence: B

EDUCATION

2021 – 2022

Unicorn University

Software Engineering

Professional software engineering studies focused on application development, programming, software architecture, databases, APIs, and agile development.

Key areas included Python, JavaScript, PHP, web and application development, software architecture, API design, database systems, and agile development.

Completed coursework. The programme was not completed with a university degree.

2017 – 2021

ISŠTE Sokolov

Information Technology · Secondary education with a school-leaving exam

Technical education focused on software development, web technologies, databases, computer systems, networking, and technical problem solving.

Key areas included application development, HTML, CSS, JavaScript, SQL, networking, system administration, hardware, automation, electronics, and robotics.

CERTIFICATES AND TRAININGS

2026

ManageEngine Endpoint Central – Mastering Endpoint Management

ManageEngine

Currently completing a comprehensive endpoint management course covering patch management, application deployment, OS imaging, remote control, endpoint security, reporting, and centralized device administration.

2026

IT Service Management (ITSM) – Presales Training

ManageEngine

Successfully completed the IT Service Management (ITSM) – Presales Training on 31 August 2026.

2025

Apple Certified Technician (AASP)

Apple

Professional Apple service certification covering technical diagnostics, hardware and software troubleshooting, repair procedures, device servicing, system restoration, and structured service workflows across Apple platforms.

INTERESTS AND HOBBIES
